

## **INTEGRATED NETWORK SOLUTIONS SHOWS SMALL TO MID-SIZED BUSINESSES HOW TO OFFER “FREE WI-FI” TO THEIR CUSTOMERS THE RIGHT WAY**

*SMBs Turn to Integrated Network Solutions for Best Practices on Attracting Clients*

SAVANNAH, GA — September 30, 2014 — Integrated Network Solutions Inc., an industry leader in unified communications, announced today that the company is educating its customers on a breakthrough development in high-speed wireless Internet, which can increase the number of customers that many small to mid-sized businesses (SMBs) attract. The breakthrough is called Hosted Wi-Fi, which is essentially a private Internet hotspot for SMBs to offer to their customers. By offering customers free WiFi, a business can regulate and optimize Internet data usage and even create a private network for them to use. The overarching benefits of this technology is that it attracts new people to your location, it gets people to stay longer and gives them a reason to come back next time.

With the overwhelming majority of people simply expecting free Wi-Fi everywhere they go, it's no wonder that this technology has taken off. Most business owners simply use the standard Internet provided to them by ISPs, and they're missing out on the high performing Internet connectivity that customers have come to expect. Furthermore,

standard Internet lacks safety controls, which can be very dangerous for business owners. For example, if even one customer visits a dangerous site and contracts a virus, it could spread quickly to the rest of the network. By utilizing Hosted Wi-Fi safeguards like firewalls and blacklisted sites, businesses can eliminate these risks before they become a problem.

The central reason to offer Hosted Wi-Fi to customers is that it increases profitability. The longer that a business has a customer at its location, the greater the likelihood of purchases, brand education and return visits. The value of having a customer at your location is incredible, because businesses have so much time to engage customers and opportunity to influence their purchasing decisions. For example, a café that has Hosted Wi-Fi can provide secure, high-speed Internet for the growing remote worker population. The longer a patron remains at the shop, the more likely they are to buy additional goods and refer friends. Another example, are hotels and motels who simply need to offer Hosted Wi-Fi in order to attract guests in the first place. For many business people this is a “deal breaker” and acts as one of the key factors in their decision to stay at one hotel versus another. This easily overlooked addition to nearly any business can

increase revenue and bottom line profitability.

Businesses spend tens of thousands of dollars on building extravagant websites, which only retain customers for an approximate 10-20 seconds, according to research by Chao Liu and colleagues. When someone visits a physical location, business owners can captivate their attention for hours at a time. Meanwhile, business owners can influence their customers' purchasing decisions the entire time. For its minimal cost, this investment makes sense and it's no wonder businesses are working with A3 Communications to deploy this powerful technology.

### **ABOUT INTEGRATED NETWORK SOLUTIONS INC.**

Integrated Network Solutions Inc. (INS) is a Savannah, Georgia based converged technology company. INS was incorporated in 1990 to provide high quality, cost-effective voice and data services with an emphasis on mutually beneficial business relationships.
